### *PRESS INFORMATION:*

## **Hit The Road Faster With The Air Force Blaster- The Most Powerful Bike Dryer On The Market!**

**Dateline: Suffern, New York**—Bikers all over the country who would rather ride their bikes than clean them, are loving the awesome power of the Metropolitan Vacuum Cleaner Company's **Air Force Blaster**. Touted by many industry professionals as "the most powerful and efficient motorcycle dryer money can buy", it consistently cuts bike drying time by 75-80%!

The **Blaster** blows high-velocity, dry, warm (20—25 degrees above ambient temperature) filtered air that safely blasts water off bikes in seconds. It leaves no spots or oily residue and completely eliminates "after streaking"—those annoying streaks that appear out of nowhere when you start riding because of missed, hidden water drops. With the **Blaster**, water has no place to hide.

According to **David Stern**, Metro's Marketing VP and himself an avid biker... "One of the most common things I'm asked is: what's wrong with drying my bike using compressed air or a leaf blower?"...to which he is quick to respond..."First of all, air from a compressor is not filtered and any oils, dust or other residue in the tank blows right out onto your finish. Condensation is also an inherent problem with compressors so you wind up trying to dry your bike with cool, damp air! And then there's the problem of pressure. It's much too high and likely to rip off a loose piece of chrome or paint if you're not very careful!"

David gives a similarly low rating to leaf blowers...“ They’re big, heavy and extremely cumbersome making it virtually impossible to direct air with enough precision to thoroughly dry the bike without blowing all kinds of dirt and grit onto it. They also blow cool, unheated air that takes forever to dry.”

The **Air Force Blaster** is built with pride in the U.S.A. and features rugged, all-steel construction with a bullet-proof, industrial-strength motor cranking out an awesome 4.0 Peak Horsepower (29,000fps). Despite its strength and power, the **Blaster** is lightweight and portable, with an extra long power cord, 10½ ft. flexible hose and a full range of attachments that allow you to easily snake around and thoroughly dry every inch of any bike.

New for 2005, is the Air Force Blaster’s rugged cousin, the **Master Blaster** designed for the continual heavy usage of the motorcycle detailer or dealer where there is a heavy volume of detail work put through every day. This heavy duty version features twin 4.0 horsepower motors, delivering an amazing 58,500 FPM of safe, dry, filtered warm air. Two switches allow the users to set the airflow and temperature at 3 different levels. The detailer can use either the front or rear motors independently or both simultaneously for maximum power. Five different nozzles enable users to target airflow where desired, and eliminate water spots in those hard to get spots forever.

For more information on the **Air Force Blaster** or the **Master Blaster**, see your local dealer, visit [www.kansport.com](http://www.kansport.com) or call **1-866-344-5059**.

**Metropolitan Vacuum Cleaner Co., Inc.**, the manufacturer of the Air Force Blaster/Master Blaster was established in 1939 in a small Bronx, NY storefront. From these humble beginnings, the company has evolved and grown into a large, multidivisional manufacturing corporation now headquartered in Suffern, New York. Over the last 66 years, Metropolitan has pioneered many industry firsts and today manufactures and markets such well known brands as **Data-Vac** computer cleaning systems, **Vac’N’Blo** automotive cleaning systems and **Magic Air** inflation systems, in addition to the **Air Force** motorcycle and pet dryer lines.

## Why Should I use the Air Force BLASTER OR the Master Blaster?

Nationally acclaimed and advertised in American Riders, EasyRider, Hot Bike and Thunder Press!  
 We bring the customers to your dealership already interested!

Make the comparison and see that the **Air Force Blaster®** is the only choice for properly and safely drying your bike! **Proudly made in the USA!**

	AIR COMPRESSOR	LEAF BLOWERS	AIR FORCE BLASTER ®	COMMENTS
LEAVES RESIDUE & OILS	YES			Dirty air: Air Compressors and Leaf blowers do not filter the air, any residue or oil will blow onto your bike, possibly scratching the surface.
		YES		
FILTERED AIR			NO!	<b>AIR FORCE BLASTER®</b> air is filtered clean, protecting your bike from scratches!
	NO	NO		Air Compressors and leaf blowers do not filter their air!
DRY AIR			YES!	<b>AIR FORCE BLASTER®</b> air is filtered, protecting your bike from scratches!
	NO	NO		The air is not dry, humidity and moisture is an inerrant problem and difficult to eliminate.
PROPER AIR PRESSURE			YES!	<b>AIR FORCE BLASTER®</b> air is dry. The dryer will heat up approx. 20 to 25 degrees above ambient temperature.
	NO	NO		Air Pressure is too great, may loosen decals or loose chrome.
PROPER AIR TEMPERATURE			YES!	<b>AIR FORCE BLASTER®</b> produces a high velocity of warm air with correct pressure and flow for your bike.
	NO	NO		Air is not warm or heated, therefore not proper method for drying your bike.
EQUIPMENT SIZE & FLEXIBILITY			YES!	<b>AIR FORCE BLASTER®</b> produces a high velocity of warm air!
	NO	NO		Leaf Blowers can be large and cumbersome, no special tools for hard to reach places.
			YES!	<b>AIR FORCE BLASTER®</b> less than 8lbs, completely portable. Will fit into most saddle bags and comes with a host of attachments for hard to reach places.
